Programme name: Workshop on 3D printing
Number of hours: Four hours (IV Semester Business Analytics minor MBA students)
Number of attendees: 63 students
Timing and Date: 19th July, 2024 (2.00 PM to 6:00 PM)
Venue: Centre for Emerging Technology
Faculty: Prof. N. Nagasubba reddy & Prof. Swaraj S Bharti
About the workshop: 3D printing or additive manufacturing is a process of making three dimensional objects from a digital file. 3D printing is an additive technology used to manufacture parts. It is 'additive' in that it doesn't require a block of material or a mold to manufacture physical objects, it simply stacks and fuses layers of material. It's typically fast, with low fixed setup costs, and can create more complex geometries than 'traditional' technologies, with an ever-expanding list of materials. It is used extensively in the engineering industry, particularly for prototyping and creating lightweight geometries.
Objectives:

a) The students must understand the concept of 3D printing as a form of Additive manufacturing.
b) The students understand the practical application of 3D printing along with live examples.
c) The students are able to design their own 3D model and perform slicing.
d) The students are able to print their own 3D models using a 3D printer.

Resource person profile:
Mr. Raghunandan Bung (Founder & Director, WTD Design & Planning Services). Architect with extensive experience in designing and managing architectural projects. He is the founder & director at WTD Design & Planning Services, Bangalore. In addition to his architectural work, he possess significant expertise in 3D printing technology, which his firm actively utlizes as a crucial design tool. He has considerable experience in conducting 3D printing workshops.
Topics covered:

a) What is 3D printing?
b) History of 3D printing
c) Application of 3D printing
d) Parameters for successful 3D print

Attendance:
List of the 4th semester students present in the workshop along with signature.

Outcomes:

a) The students understood the concept of 3D printing and the history of 3D printing
b) The students learnt the practical application of 3D printing along with live examples.
c) The students designed their own 3D model and performed slicing.
d) The students printed their own 3D models using a 3D printer in the workshop.
